

Sustainability policy K-Prefab

In our effort to deliver complete concrete frames, K-Prefab shall contribute to long-term sustainability in society.

We will continue to be at the forefront of sustainability. Through continuous improvement we shall make every effort to prevent pollution, reduced use of finite resources, reduced climate impact, conserve biodiversity and make efficient use of resources in the business. This means e.g. that we should minimize our waste, reduce the carbon footprint of our concrete production, strive for fossil-free production and optimize our transports.

The life cycle perspective will be the foundation in our improvement work.

- We have a good collaboration with suppliers and customers.
- We make extensive environmental and safety requirements on our suppliers.
- With our products and assembly our ambition is to help our customers meet the requirements on sustainability in their projects.
- As far as it is technically and economically possible, we shall strive to avoid materials and methods leading to environmental risks and prefer to make use of safer alternatives.
- We will actively work with circular economy e.g. by recycle waste and residual material directly in our processes and reducing our consumption of binding agents.

We shall meet and try to exceed the obligatory requirements from various stakeholders that apply to our operations.

K-Prefab work in accordance with the Swedish Construction Federation (Byggföretagen) Code of Conduct and strives for long-term and value-creating relationships with our customers, suppliers, employees and society at large.

We follow the guidelines of the UN Global Compact and the Core Conventions of the ILO and the OECD's guidelines for multinational companies.

Our suppliers must comply with the UN Convention on Human Rights, work systematically with work environment and comply with applicable collective agreements or other national rules to ensure fair work conditions.

K-Prefab shall contribute to a sustainable social development and support where it does the most good. For example, sponsor local clubs, associations and organizations in sports, culture and society and be a partner in organizations that work to reduce poverty in the world.

Our committed, conscious and knowledgeable employees are the driving force in our sustainability work.

Malmö May 2022

Stefan Paulsson

Acting CEO K-Prefab AB
